RESTRICTION

1. This office action is responsive to the amendment filed on 1/18/06.

Restriction to one of the following inventions is required under 35 U.S.C.121:

- I. Claims 1, 3, and 9-14, drawn to a non-negative acceleration control comprising an external transmitter, and an internal non-negative acceleration control activated in traffic congestion zone, classified in class 342, subclass 82.
 - II. Claims 4-8, drawn to an acceleration control system, including an activation module coupled to a power source and a power output, activation module sending power through power output, classified in class 318, subclass 90.
2. Inventions I, and II, are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions because: invention I disclose a non-negative acceleration control comprising an external transmitter, and an internal non-negative acceleration control activated in traffic congestion zone, invention II disclose an acceleration control system, including an activation module coupled to a power source and a power output, activation module sending power through power output.
 3. Because these invention are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3661
